# Computations of examples from the paper:

# On Rational Recursion for Holonomic Sequences (Examples 1-4)

Bertrand Teguia Tabuguia and James Worrell Department of Computer Science, University of Oxford

The algorithm is implemented as a command of the NLDE package, available at https://github.com/T3gu1a/D-algebraic-functions

with (NLDE, HoloToSimpleRatrec)

#### Example 1:

# Example 2

Example 2
$$\begin{bmatrix} (n!^2)_n \\ \end{bmatrix}$$

$$p := s(n+1) - (n+1)^2 \cdot s(n)$$

### Example 3

### **Example 4**

$$\left[ \left( \frac{2 \cdot n}{n} \right) \cdot {3 \cdot n \choose n} \right)_n$$
>  $p3 := s(n+1) \cdot (n+1) \cdot 2 - 3 \cdot (3 \cdot n+1) \cdot (3 \cdot n+2) \cdot s(n)$ 
>  $HoloToSimpleRatrec(p3, s(n), method = LA)$ 

$$\left[ \left( \frac{n^4}{2^n} + 3^n \right)_n \right]$$
>  $p4 := \left( 15 n^4 + 48 n^3 + 36 n^2 - 24 n - 30 \right) s(n) - \left( 7 n^2 + 4 n + 4 \right) \left( 5 n^2 - 4 n - 4 \right) s(n+1) + \left( 10 n^4 - 8 n^3 - 12 n^2 - 8 n - 2 \right) s(n+2)$ 
>  $HoloToSimpleRatrec(p4, s(n), method = LA)$ 

Random polynomial (not necessarily the same as in the paper).

>  $p5 := s(n) + randpoly(n, degree = 5)$ 
>  $HoloToSimpleRatrec(p5, s(n), method = LA)$
